

High Performance European Style Miniature Sensors

- Red LED and laser emissions
- Highly precise & safe laser Class 1 emission
- Diffused LED proximity 800mm
- Background suppression 400mm
- Retroreflective Class 1 laser 15m/red LED 7m
- Through beam Class 1 laser 20m/red LED 15m
- IP69K housing
- 2m cable or metal M8 4-pole version
- PNP or NPN output with remote Teach-in input
- High speed RGB and white emission contrast sensor
- High precision distance sensor up to 200 mm

SENSORS

APPLICATIONS

- Processing and Packaging machinery
- Cosmetic and Pharmaceutical industry
- Electronics assembly
- Conveyor lines, material handling
- Automotive industry
- Print and paper industry
- Small part detection with maximum accuracy

BACKGROUND SUPPRESSOR

The diffused background suppressor (BGS) models are characterized by the reliable detection of any color and surface type objects even with highly reflective backgrounds. The powerful Red LED makes the installation and sensor alignment very easy thanks to the bright visible spot. The adjustment via Teach-in and remote control inputs are fast and easy. This optic function comes in two different models and ranges: one model for long range detection up to 400 mm and the other model up to 200 mm detection range, both with excellent black and white shift.

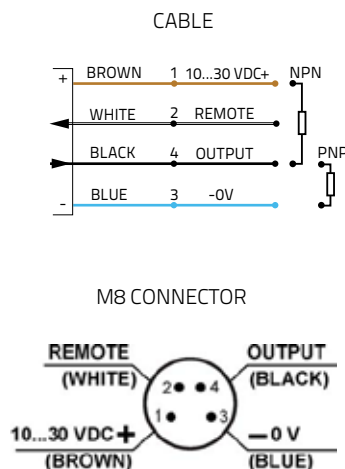

HIGHLIGHTS

- Short and long distance detection for improved precision
- Adjustable sensing distance with Teach-in button
- Easy alignment with highly visible LED
- Superior performance even with highly reflective backgrounds
- Remote input setting

ENERGETIC DIFFUSED

The Energetic Diffused models are characterized by superior object detection performance even on a gray target. The powerful RED LED projects a bright visible spot for installation and sensor alignment. Adjustment via Teach-in and remote control inputs are fast and easy. The RED LED model delivers excellent performance with an 800mm operating distance in a very compact size.

HIGHLIGHTS

- Long distance sensor
- High visibility LED
- Easy alignment
- Remote Teach-in

RETROREFLECTIVE POLARIZED

The Retroreflective Polarized models are characterized by exceptional object detection performance suitable for many reflector types. With a bright, visible red LED, installation and sensor alignment is quick and simple. Adjustment via Teach-in and remote control input is fast and easy.

HIGHLIGHTS

- Long distance sensor
- High Visibility LED
- Easy alignment on reflector
- Remote Teach-in

COAXIAL RETROREFLECTIVE POLARIZED

The Coaxial Retroreflective Polarized model is characterized by reliable detection of any object. Performance is guaranteed by a state-of-the-art autocollimating optical system that delivers precise detection from a distance of 0 mm up to 2 m. The sensor is equipped with a unique auto adaptive system which continuously selects the best detecting condition. The powerful LED emission makes the sensor alignment easy and precise. The system is so precise that an object can be detected through narrow openings or drilled holes. Cable versions are available upon request.

HIGHLIGHTS

- Reliable detection for any kind of object
- Visible light spot for precise, easy alignment of the sensor
- Autocollimated optics for reliable detection starting from 0m
- Remote Teach-in

RETROREFLECTIVE FOR TRANSPARENT

The Retroreflective for transparent objects model is characterized by a reliable detection system for transparent objects with any kind of shape. The performance level is guaranteed by a state of the art autocollimating optical system which offers precise detection from a distance of 0 mm up to 2 m. The Retroreflective for transparent objects model uses a unique auto adaptive system which continuously selects the best detection condition. The powerful LED emission makes the sensor alignment easy and precise.

HIGHLIGHTS

- Visible light spot for precise and easy alignment of the sensor
- Autocollimated optics for reliable detection starting from 0m
- Adaptive function to improve detection when dust and dirt are present
- Precise and reliable detection of transparent objects

THROUGH BEAM

The through beam light barrier models are characterized by a very compact form factor. The powerful LED emission is a real advantage during alignment operation at a long distance range, the detection is reliable and precise. The adjustment via Teach-in and remote control input is fast and easy.

HIGHLIGHTS

- Very simple alignment with highly visible LED light
- Test input for functional test
- Remote Teach-in setting

LASER BACKGROUND SUPPRESSOR

The diffused background suppressor (BGS) models are characterized by reliable detection of any object color or surface type even with highly reflective backgrounds. The Laser Class 1 emission is excellent in applications for the detection of very small objects.

The adjustment via Teach-in and remote control input is fast and easy. This sensor is characterized by an excellent B/W shift which is less than 4% at the farthest range. Cable versions are available upon request.

HIGHLIGHTS

- Precise and highly visible spot
- Very small object detection
- Safe Class 1 laser emission
- Excellent performance on any object color or surface type
- Easy alignment on reflector
- Remote Teach-in setting

LASER ENERGETIC DIFFUSED

The Energetic Diffused models are characterized by superior object detection performance even on gray targets. Thanks to a bright, highly visible red laser, installation and sensor alignment is very easy. The adjustment via Teach-in and remote control input is fast and easy.

The laser model has a very sharp, highly visible spot for best-in-class, precise detection of objects. The Class 1 laser emission delivers high performance with safe operating conditions. Cable versions are available upon request.

HIGHLIGHTS

- Long distance sensor
- High visibility LED
- Easy alignment

LASER THROUGH BEAM

The through beam laser light barrier models are characterized by a superior operating distance. The safe yet powerful class 1 laser emission delivers reliable and precise detection over long distances. With a small and highly visible spot, the through beam laser light barrier sensors offer significant advantages for installation and alignment. The adjustment via Teach-in and remote control input is fast and easy. The TEST input provided in the Emitter sensor is very useful to check the sensor pairs functionality. Cable versions are available upon request.

CONTRAST SENSOR

The S45 contrast sensor models are offered with a wide range of features and options. The product range is characterized by two different type of light emissions, with multicolor RGB LED and bright white LED. With this functionality, S45 can cover all the possible contrast sensor applications in the market. S45 delivers precise and reliable detection with the slightest contrast difference, fluttering or glossy objects, and very high position accuracy with 10 μ s scanning jitter. The S45 performs at a high speed operating frequency of up to 25 kHz. Object alignment is easy and very precise with the very visible and thin shaped light spot. Cable versions are available upon request.

HIGHLIGHTS

- High performance even in applications with minimal contrast differences
- Glossy and fluttering objects do not affect the sensor operation
- The 10 μ s low jitter functionality allows for very precise detection and positioning
- Highly visible spot in both white and RGB versions for improved precision
- Simple alignment with accurate optics system
- Push Pull Output

DISTANCE SENSOR

The S45 miniature distance sensors offer both long range and short range models, covering all applications up to 200mm.

These sensors are characterized by high repeatability and linearity for precise controls, object surface independent detection, invertible analogue output characteristic, windowed detection mode.

The compact S45 distance sensors are made of rugged materials purpose built for harsh industrial environments.

Cable versions are available upon request.

HIGHLIGHTS

- High surface independence by color and type
- Inversion of the analog characteristic
- Window mode for two set point detection
- High linearity and repeatability
- 0...10V analog output

R6	36 x 55mm with 40.5 x 60mm support	95A151350
RT3870	200 x 300mm self-adhesive reflective tape	S940000600
RT3970	200 x 300mm self-adhesive reflective tape for polarized light	S940000604
RT3970	60 x 40mm self-adhesive reflective tape for polarized light	S940000900

CODING

S45 – P R – 5 – B03-PH

S45	-	P	Plastic	R	LED radial optics	2	cable	B	Polarized Retroreflective	0	Short Distance White 10kHz (W)	0	no adjustment	O	Push-Pull	E	Test Input +
				H	Laser radial optic	5	Connector	C	Energetic Diffused	1	Long Distance White 25kHz (W)	3	Teach In	N	NPN	H	Remote Input
								F	Receiver Through Beam	3	RGB 10kHz (W)			P	PNP	V	Analog out voltage
								G	Emitter Through Beam	4	RGB 25kHz (W)			X	No input No ouput		
								M	Background Suppressor	5	Autocollimated						
								T	Retroreflective for Transparent								
								W	Contrast Sensor								
								Y	Distance Sensor
