Softstarters

Type PSR, PSE and PSTX

Motors use almost one third of the world's generated electricity. So it is safe to say that reliable motor operation is crucial to our modern way of life.

Yet millions of these motors are not run optimally. The wear and tear associated with frequent starts and stops cause unplanned stoppages and shortened operational lifetime. The uptime of full-speed motors would be greatly improved if softstarters were used. As the name implies, softstarters enable smooth motor

starting and stopping, thus optimizing both new and existing motors. For motor protection on a global scale, by simply using softstarters, this could have a major impact in taking control of the processes around us.

ABB softstarters

How we are helping the industry

1

Softstarters from ABB offer multiple values and benefits. Whether you are a consultant, OEM, panel builder or end-user, softstarters will add to your business value by securing motor reliability, improving installation efficiency and increasing application productivity.

Secure motor Reliability

ABB softstarters help increase your motor's lifetime by protecting it from electrical stress. Starting currents are easily optimized to your load, application and motor size. Over ten motor protection features are included to keep your motor safe from different load and network irregularities.

Improve installation Efficiency

Reduce your installation time and panel size by having all the features you need built into your softstarter. Our softstarters are easy to install thanks to their compact design and many built-in features. The built-in bypass saves energy and space while reducing heat generation—a complete motor starting solution in one unit.

Increase application Productivity

Reduce the number of stops in your production by allowing your softstarter to do more than just starting. Our softstarters reduce the mechanical stress on your motor application, which will increase your uptime. Torque control, pump cleaning, motor brake and many other features enable you to operate your process at its full potential.

Xylem - South Africa ABB softstarters provide efficiency in the mining industry

One of Xylem’s water solutions helps to prevent flooding in mines. Previous softstarters needed a lot of extra protection equipment. Xylem was looking for a simpler solution that would ensure reliability even at a depth of 3,500 meters. Reducing the number of components by 80 percent shortened installation time by 60 percent. By cutting costs in half, Xylem can sell twice as many panels with softstarters than before.

Why softstarting matters to Xylem

For more examples of how ABB softstarters are helping the industry, visit www.abb.com/lowvoltage/launches/pstx.

ABB softstarters

Improving industrial processes around the globe

1

Softstarters can do wonders for your operations. Packed with useful features, they reduce the wear of your equipment, improve the reliability of your processes, and increase overall productivity.

Controlling pumps

Eliminating water hammering with torque control

Water hammering is a common problem with pumps. It typically results in a lot of wear on pipes and valves when stopping the pump. ABB softstarters feature torque control stop which eliminates water hammering and prolongs the lifetime of the system, while reducing pump downtime.

Keep pipes and pumps clean

There is a risk of pumps clogging over time. This will cause reduced flow and increased risk of pump damage. Thanks to the feature that reverses the direction of the flow and starts again with kick-start, ABB softstarters can help prevent and solve pump clogging and associated downtime.

Avoid running dry with underload protection

Damage due to pumps running dry can be avoided with the softstarter feature underload protection. It stops the motor which saves the pump from additional wear and contributes to prolonging its lifetime.

Controlling fans

Soft starting adjusted to application

Fans normally have a high moment of inertia, which makes starting tough and current high. If an ABB softstarter is used, the voltage is increased gradually during start, which reduces the current and removes the inrush peak. It is possible to adjust the settings to fit almost any starting condition, from unloaded to fully loaded.

Fast stops with motor braking

It can also take a long time to stop the fan. Active braking using the dynamic brake feature reduces stopping times. This improves process safety when the load has a high moment of inertia thereby making fan operation easier for the operator.

Avoid unwanted movements with stand-still brake

An idle fan that is rotating backwards due to wind or airflow from another fan can be kept still using the stand-still brake. It prevents unwanted airflow and improves the control of the system without the need for an external mechanical brake.

Controlling conveyor belts

Avoid overheating with overload protection

Too much material on a conveyor belt may cause overload and overheating, reducing the reliability and longevity of the motor. The ABB overload protection feature shuts down the motor in case of overload, avoiding overheating.

Increased flexibility with jog with slow speed

After stopping the belt, it may be necessary to run the motor at low speed to correctly position the belt before resuming operation. The jog with slow speed feature makes it possible to position the belt manually, in both forward and reverse, before restarting the belt. This improves process efficiency and eliminates the need for a variable speed drive, which is a considerably more expensive solution.

Continuous operation with limp mode

Shorted thyristor is a possible problem for a softstarter, putting it out of operation until the component has been replaced. Using limp mode, the softstarter will continue to work with one thyristor shorted, avoiding costly unplanned stoppages.

Controlling compressors

Full control of current with current limit

Many applications are sensitive to high or variable starting currents. The feature current limit makes it possible to start the motor securely even in a weaker network, improving the availability of the equipment and system. Reducing the current means reducing the stress on cables, the network, and motor.

Full voltage start for scroll compressors

For scroll compressors it is often necessary to start the motor in a very short time while still maintaining a low starting current. Full voltage start is a start mode that gives you almost a direct start but without the current peak.

Phase reversal protection for problem-free commissioning

A motor rotating in the wrong direction, which may occur due to incorrectly connecting the phases, may cause severe damage to a compressor. Using phase reversal protection, the motor won't start in the wrong direction, avoiding costly compressor downtime and repairs.

ABB softstarters

Why motor starting and stopping matters

1

There are some common issues associated with starting and stopping electrical motors. Depending on the requirements, different starting and stopping methods can be used.

Direct-on-line

Direct-on-line starting (DOL, also across the line starting) is the easiest and most commonly used starting method. It is suitable for stable networks and mechanically stiff and well-dimensioned shaft systems due to the high current and torque generated during start.

DOL starting is uncontrolled, which means that the motor will start with maximum current and torque regardless of load type.

Star-delta

A star-delta starter reduces current and torque during start. The starting current is about one third compared to direct-on-line starting, although it also reduces the starting torque to about 25 percent.

Star-delta is not adjustable, so if the torque is reduced too much, the motor will not start. Current peaks will happen when switching from star to delta connection.

Softstarter

Like direct-on-line and star-delta starters, softstarters are used to start and stop motors in full-speed applications. It eliminates common problems associated with motor starting and stopping, including electrical surges, spikes and high inrush currents.

Because it offers soft starting and stopping, a softstarter is the optimal compromise between a direct-on-line or star-delta starter and a variable speed drive in many full-speed motor applications.

Torque

Motor current

— DOL
- - - Star-delta
— Softstarter

Typical torque and current curves from starting a motor using DOL, star-delta and softstarter.

Variable speed drive

Like a softstarter, a variable speed drive (VSD) can perform soft motor starting and stopping. However, the VSD was designed primarily to control motor speed, resulting in energy efficient motor operation in variable speed applications.

Using a VSD with the sole purpose of ensuring soft starting and stopping of full-speed motors is an unnecessary solution.

ABB softstarters

A solution for every need

The ABB softstarter offering consists of three ranges, covering every need. Our products help you secure motor reliability, improve installation efficiency and increase application productivity.

PSR – The compact range

Technical data:

Rated motor current	3...105 A
Main motor voltage	208...600 V
Control supply voltage	100...240 V AC or 24 V AC/DC

PSE – The efficient range

Technical data:

Rated motor current	30...370 A
Main motor voltage	208...600 V
Control supply voltage	100...250 V AC

PSTX – The advanced range

Technical data:

Rated motor current	30...1250 A (inside delta: 2160 A)
Main motor voltage	208...690 V
Control supply voltage	100...250 V AC

ABB softstarters

A part of your motor starting solution

1

Motor starting requires several components to work perfectly together. ABB is a one-stop shop for motor starting, offering all the necessary components and complete motor starting solutions, proven by the numerous installations worldwide.

1 Softstarter

- Soft start and stop with reduced current
- Features to improve process productivity
- Detachable keypad for front door mounting on a panel

2 Short circuit breaker MCCB

- Short circuit protection of motor
- Possibility for electrical isolation

Can I use a softstarter for an ATEX motor?

ABB softstarters PSR, PSE and PSTX can be used to start ATEX classified motors in Ex environments if the following considerations are taken into account:

- The softstarter has to be placed outside the Ex area, either in another location or inside an ATEX approved panel.
- A separate ATEX approved overload relay from ABB must be used together with a line contactor. This overload relay will replace the built-in EOL in the softstarter and has an ATEX approved tripping curve.
- Select softstarter according to normal or heavy-duty start depending on application and line contactor and overload relay with Type 2 coordination.

- 3 Pilot devices**
- Remote control of motor
 - Indication of softstarter and motor status with light and sound
 - Emergency stop of motor

- 4 Power supply CP-E**
- Possible to use 24 V AC/DC equipment in the panel, e.g. PLC

- 5 Liquid level monitoring relays CM-ENS**
- Monitoring and signalling the water level

- 6 PLC 800M**
- Automatic control
 - Remote communication

- 7 Terminal blocks SNK range**
- Easy installation of control wires

- 8 Line contactor AF**
- Isolation at stop
 - Isolation at faults
 - Emergency stop
 - Back-up DOL starter

Can I use a softstarter on a ship?

ABB softstarters PSE and PSTX have marine approvals and are certified for marine environment.

Ships use IT networks, which means there is a floating electrical ground. It is possible to use an ABB softstarter in such a network, but it is recommended to not connect the functional earth or ground on the softstarter to the ship to avoid disturbances from the network to that would affect the electronics inside the softstarter.

PSR – The compact range

Introduction

2

The PSR softstarter is the most compact of all the softstarter ranges, which allows for the design of compact starting equipment. A PSR together with a manual motor starter makes up a far more compact starting solution than a star-delta starter, and with the built-in bypass, the energy losses inside the softstarter are highly reduced.

- Two-phase controlled
- Operational voltage: 208...600 V AC
- Wide rated control supply voltage: 100...240 V AC, 50/60 Hz or 24 V AC/DC
- Rated operational current: 3...105 A
- Soft start with voltage ramp
- Soft stop with voltage ramp
- Built-in bypass for energy saving and easy installation
- Easy set-up by three potentiometers
- Fieldbus communication with FieldBusPlug adapter and the FieldBusPlug
- Run and Top of Ramp relays available for monitoring
- Connection kits available for connection to ABB manual motor starters (MMS)

Secure motor Reliability

Reduce the electrical stresses and keep the motor protected with the MMS

The PSR reduces the starting current for the motor. The possibility of connecting it to the manual motor starter makes it possible to build a compact and complete starting solution with overload and short-circuit protection.

Improve installation Efficiency

Saving time and money with built-in bypass and easy set-up

On the PSR, the bypass is built-in and verified by ABB, saving you time during installation and providing more space in your panel. Set-up is done through three potentiometers making it very fast and easy.

Increase application Productivity

Reduce the mechanical stresses on your motor

Soft start and stop with PSR will reduce mechanical wear and tear on the application and increase the availability and uptime.

PSR – The compact range

Introduction

Motor protection with manual motor starter

Use the PSR together with the MMS to get a complete motor starter with soft start and stop together with overload and short circuit protection.

Connection kit (optional)

The connection kits simplifies installation of the PSR by making the connection to the MMS screwless.

Screw or DIN-rail mounted

PSR is fast and easy to install by using screw mounting or DIN-rail mounting (PSR3...PSR45).

Output signal relays

PSR has output relays for Run and Top of ramp (PSR25...PSR105).

LED indicators

PSR has LED indicators for On/Ready and Run/Top of ramp.

Three potentiometers for settings

Set-up is made very easy with only three potentiometers, for start ramp time, stop ramp time and initial/end voltage level.

Settings

- ① Start = 1...20 sec
- ② Stop = 0...20 sec - including the step down voltage
Step down = 2% reduction for each second increased stop ramp
- ③ U_{ini} = 40...70% results in end voltage = 30...60%

PSE – The efficient range

Introduction

3

The PSE has been designed to meet the most common requirements from the water management sector, and is specialized in pump operation. It combines the requested protections with a very compact design and built-in bypass. Remote operation with external keypad or over fieldbus is available as an option.

- Two-phase controlled
- Operational voltage: 208...600 V AC
- Wide rated control supply voltage: 100...250 V AC, 50/60 Hz
- Rated operational current: 18...370 A
- Voltage ramp and torque control for both start and stop
- Current limit
- Kick-start
- Built-in bypass for energy saving and easy installation
- Coated PCBA protecting from dust, moist and corrosive atmosphere
- Illuminated display that uses symbols to become language neutral
- External keypad rated IP66 (Type 1, 4X,12) as an option
- Fieldbus communication with FieldBusPlug adapter and the FieldBusPlug
- Analog output for display of motor current
- Electronic overload protection
- Underload protection
- Locked rotor protection

Secure motor Reliability

Basic motor protection and current limit

The PSE includes the most important protections for handling different load situations that can happen to pumps e.g. overload and underload. The current limit gives you more control of the motor during start and allows you to start your motor in weaker networks.

Improve installation Efficiency

Saving time and money with built-in bypass and compact design

On the PSE, the bypass is built-in and verified by ABB, saving you time during installation and providing space in your panel. The keypad is language neutral and illuminated for easy set-up and operation in field. The compact design makes installation fast and easy.

Increase application Productivity

Torque control for elimination of water hammering in pumps

Torque control is the most efficient way to stop a full speed pump. The PSE has a special torque stop ramp that is designed together with a pump manufacturer to eliminate water hammering in an optimal way.

PSE – The efficient range

Introduction

Screw mounting

PSE is fast and easy to install by using screw mounting.

Digital input for start, stop and reset

PSE is controlled through digital inputs using the internal 24 V DC source. This allows easy control with e.g. pushbuttons or relays.

Output signal relays for run, top of ramp and event

Three output signal relays for indicating that the motor is running, that the softstarter is in top of ramp and if any event has happened. The relays can be used e.g. with pilot lights or to control a line contactor.

Clear markings on the front for easy installation

All markings are on the front, making it very easy to read after installation.

LED indicators

- Green ready LED
Flashing - Supply available
Steady - Main available
- Green run LED
Flashing - Ramping up/down
Steady - TOR
- Yellow protection LED
- Red fault LED

Illuminated and language-neutral display with icons

The display on PSE uses icons for fast and easy set-up of parameters. Each icon indicates a different parameter to set and makes navigation and setting of parameters easy. Set-up is done by using the four buttons on the keypad.

PSE – The efficient range

Technical data

Tripping curves for the integrated electronic overload protection

PSE has an integrated electronic overload protection that can be set to four different tripping classes. Below find a curve for each tripping class in cold state.

PSE – The efficient range

Technical data

3

Softstarter type		PSE18 ... PSE370
Rated insulation voltage U_i		600 V
Rated operational voltage U_o		208...600 V +10%/-15%
Rated control supply voltage U_s		100...250 V +10%/-15%, 50/60 Hz \pm 5 %
Rated control circuit voltage U_c		Internal 24 V DC
Starting capacity at I_o		4 x I_o for 10 sec.
Number of starts per hour		10 ¹⁾
Overload capability	Overload class	10
Ambient temperature	During operation	-25...+60 °C (-13...+140 F) ²⁾
	During storage	-40...+70 °C (-40...+158 F)
Maximum altitude		4000 m (13123 ft) ³⁾
Degree of protection	Main circuit	IP00
	Supply and control circuit	IP20
Main circuit	Built-in bypass	Yes
	Cooling system — fan cooled (thermostat controlled)	Yes
HMI for settings	Display	4 7-segments and icons. Illuminated
	Keypad	2 selection keys and 2 navigation keys
Main settings	Setting current	Size dependent
	Ramp time during start	1...30 sec
	Ramp time during stop	0...30 sec
	Initial/end voltage	30...70%
	Current limit	1.5...7 x I_o
	Torque control for start	Yes / No
	Torque control for stop	Yes / No
Signal relays	Kick start	Off, 30...100%
	Number of signal relays	3
	K2	Run signal
	K3	TOR (bypass) signal
	K1	Event signal
	Rated operational voltage U_o	250 V AC/24 V DC ⁴⁾
	Rated thermal current I_{th}	3 A
Analog output	Rated operational current I_o at AC-15 ($U_o = 250$ V)	1.5 A
	Output signal reference	4...20 mA
	Type of output signal	I Amp
	Scaling	Fixed at 1.2 x I_o
Control circuit	Number of inputs	3 (start, stop, reset of faults)
Signal indication LED	On / Ready	Green flashing / steady
	Run / TOR	Green flashing / steady
	Protection	Yellow
	Fault	Red
Protections	Electronic overload	Yes (Class 10A, 10, 20, 30)
	Locked rotor protection	Yes
	Underload protection	Yes
Fieldbus connection	Connection for ABB FieldBusPlug	Yes (option)
External keypad	Display	LCD type
	Ambient temperature	
	During operation	-25...+60 °C (-13...+140 F)
	During storage	-40...+70 °C (-40...+158 F)
	Degree of protection	IP66

¹⁾ Valid for 50% on time and 50% off time. If other data is required, contact your local ABB office.

²⁾ Above 40 °C (104 °F) up to max. 60 °C (140 °F) reduce the rated current with 0.6% per °C (0.33% per °F).

³⁾ When used at high altitudes, above 1000 meters (3281 ft) up to 4000 meters (13123 ft), de-rate the rated current using the following formula. [% of $I_e = 100 - \frac{x - 1000}{150} \times x$ = actual altitude of the softstarter in meters. [% of $I_e = 100 - \frac{y - 3280}{480} \times y$ = actual altitude of the softstarter in feet.

For derating of voltage, contact your local ABB office.

⁴⁾ A common voltage needs to be used for all 3 signal relays.

PSTX – The advanced range

Introduction

4

The PSTX combines many years of research and product development with extensive knowledge of application-specific requirements and needs. It is our latest advancement in motor control and protection and adds new functionality and increased reliability.

- Three-phase controlled
- Operational voltage: 208...690 V AC
- Wide rated control supply voltage: 100...250 V, 50/60 Hz
- PSTX rated operational current: 30...1250 A (inside-delta: 2160 A)
- Both in-line and inside-delta connection
- Coated circuit boards protecting from dust, moisture and corrosive atmosphere
- Detachable keypad rated IP66 (Type 1, 4X,12)
- Graphical display with 16 languages for easy setup and operation
- Built-in bypass for energy saving and easy installation
- Built-in Modbus RTU for monitoring and control
- Support for all major communication protocols
- Analog output for measurement of current, voltage, power factor etc.

Secure motor Reliability

Complete motor protection

The PSTX offers complete motor protection in only one unit and is able to handle both load and network irregularities. PT-100, earth fault protection and over/under voltage protection along with many other functions keep your motor safer than ever.

Three types of current limit

PSTX offers three types of current limit: standard, dual and ramp. This gives you full control of your motor during start. It also allows you to use your motor in weaker networks.

Improve installation Efficiency

Built-in bypass saves time and energy

When reaching full speed, the PSTX will activate its bypass. This saves energy while reducing the softstarter's heat generation. With the PSTX, the bypass is built-in and verified by ABB, saving you time during installation and providing space in your panel.

Easy-to-use and detachable keypad

A user-friendly and clear display saves you time and resources during both setup and operation. The detachable keypad is standard on all PSTX softstarters.

Increase application Productivity

Complete control of pumps

It's time to use your processes to their full potential. The PSTX features many application enhancing features, including torque control: the most efficient way to start and stop pumps. The pump cleaning feature can reverse pump flow and clean out pipes, securing uptime of your pump system.

Jog with slow speed

The slow speed forward and backward jog feature will give you more flexibility when operating e.g. conveyor belts and cranes. The PSTX provides positioning capabilities, letting you take control of your process.

PSTX – The advanced range

Introduction

Keyhole mounting for quick installation

The PSTX is simple and quick to install using keyhole mounting, saving you valuable time during the installation.

A compact motor starting solution

When your application reaches full speed, a bypass will reduce the softstarter's energy consumption. It also reduces heat generation, which means you can save money by reducing the need for added cooling equipment. With the PSTX, the bypass is built-in and verified by ABB.

Clear markings on the front

With the PSTX, you do not need a manual to handle control circuit connections. With the self-explanatory markings on the front you can verify that the connections are done right. And with basic data on the front, identification is simple without having to take the product down.

Customizable

The PSTX has 17 pre-installed languages along with options to customize your own specific home screens (up to seven unique screens). You can use your customized home screens to show status information important to your process – and hide information that is not.

Easy to learn

A large graphical display along with built-in assistants make learning how to handle the PSTX fun and simple. The interface resembles other interfaces from ABB that streamline and help with training of field personnel.

Detachable

The PSTX comes with a detachable keypad as standard. It can be placed on your panel door, meaning you do not have to interrupt your process in order to read status information or to change settings.

Description

Selection table for heavy-duty start.

Typical applications:

- Centrifugal fan
- Conveyor belt (long)
- Crusher
- Mill
- Mixer
- Stirrer

For a more precise selection, use the online softstarter selection tool available by scanning the shown QR code or using the selection tool available at:

new.abb.com/low-voltage/products/softstarters

Selection table for heavy-duty start.

Typical applications:

- Centrifugal fan
- Conveyor belt (long)
- Crusher
- Mill
- Mixer
- Stirrer

For a more precise selection, use the online softstarter selection tool available by scanning the shown QR code or using the selection tool available at:

new.abb.com/low-voltage/products/softstarters

Tripping curves for the integrated electronic overload protection

PSTX has an integrated electronic overload protection that can be set to four different tripping classes. Below you find a curve for each tripping class in cold state.

PSTX – The advanced range

Technical data

4

Softstarter type		PSTX30...PSTX1250	
Rated insulation voltage U_i		690V	
Rated operational voltage U_e		208...600 V, 208...690V +10% / -15%, 50/60Hz ±5%	
Rated control supply voltage U_s		100...250 V +10% / -15%, 50/60Hz ±5%	
Rated control circuit voltage U_c		Internal or external 24 V DC	
Starting capacity at I_e		4 x I _e for 10 sec.	
Number of starts per hour		10 for PSTX30...PSTX370 ¹⁾ 6 for PSTX470 ... PSTX1250 ¹⁾	
Overload capability	Overload class	10	
	Ambient temperature		
Ambient temperature	During operation	-25...+60 °C, (-13...+140 °F) ²⁾	
	During storage	-40...+70 °C, (-40...+158 °F)	
Maximum altitude		4000 m (13123 ft) ³⁾	
Degree of protection		-	
Main circuit	Main circuit		
	Supply and control circuit	IP20	
	Built-in bypass contactor	Yes	
HMI for settings (Human Machine Interface)	Cooling system - fan cooled	Yes (thermostat controlled)	
	Display	LCD type, graphical	
	Languages	Arabic, Chinese, Czech, Dutch, English, Finnish, French, German, Greek, Indonesian, Italian, Polish, Portuguese, Russian, Spanish, Swedish and Turkish	
Signal relays	Keypad	2 selection keys, 4 navigation keys, start key, stop key, info key and remote/local key	
	Number of programmable signal relays	3 (each relay can be programmed to None, Run, Top of ramp, Event group 0-6, Sequence 1-3 Run, Sequence 1-3 Top of ramp or Run reverse)	
	K4	Default as Run signal	
	K5	Default as Top of Ramp (Bypass) signal	
	K6	Default as Event group 0 (Faults)	
	Rated operational voltage, U _e	250 V AC/24 V DC	
Analog output	Rated thermal current I _{th}	5 A	
	Rated operational current I _e at AC-15 (U _e =250 V)	1.5 A	
	Output signal reference	0...10 V, 0...10 mA, 0...20 mA, 4...20 mA	
	Type of output signal	Motor current (A), Main voltage (V), Active power (kW), Active power (HP), Reactive power (kVAr), Apparant power (kVArh), Active energy (kWh), Reactive energy (kVArh), cos phi, Motor temperature (%), Thyristor temperature (%), Motor voltage (%), Main frequency (Hz), PT100 temperature (centigrade), PTC resistance (Ohm)	
Control circuit	Number of inputs	2 (start, stop)	
	Number of additional programmable inputs	3 (each input can be programmed to: None, Reset, Enable, Slow speed forward (Jog), Slow speed reverse (Jog), Motor heating, Stand still brake, Start reverse, User defined protection, Emergency mode (active high), Emergency mode (active low), Fieldbus disable control, Start 1, Start 2, Start 3, Switch to remote control or Cancel brake)	
Signalling indication LED	Ready	Green	
	Run	Green	
	Fault	Red	
	Protection	Yellow	
External keypad	Detachable keypad	Yes	
	Display	LCD type, graphical	
	Ambient temperature		
	During operation	-25...+60 °C, (-13...+140 °F)	
	During storage	-40...+70 °C, (-40...+158 °F)	
	Degree of protection	IP66 (Type 1, 4X, 12)	
Start and stop functions	Soft start with voltage ramp	Yes	
	Soft stop with voltage ramp	Yes	
	Soft start with torque control	Yes	
	Soft stop with torque control	Yes	
	Kick start	Yes	
	Full voltage start	Yes	
	Sequence start	Yes, 3 different sets of settings	
	Current limit	Yes	
	Dual current limit	Yes	
	Current limit ramp	Yes	
	Torque limit	Yes	
	Pre-start function	Yes (Motor heating or Stand still brake)	
	Jog with slow speed, forward and reverse	Yes (3 speed levels)	
	Start reverse (external contactors)	Yes	
	Dynamic brake	Yes	
	Fieldbus connection	Built-in Modbus RTU	Yes
		Connection for Anybus	Yes
		Connection for ABB FieldBusPlug	Yes, with adapter

¹⁾ Valid for normal start (class 10) for 50% on time and 50% off time. If other data is required, contact your local ABB office. ²⁾ Above 40 °C (104 °F) up to max. 60 °C (140 °F) reduce the rated current with 0.8% per °C (0.44% per °F). ³⁾ When used at high altitudes, above 1000 meters (3281 ft) up to 4000 meters (13123 ft), derate the rated current using the following formula.

[% of I_e = 100 - $\frac{x-1000}{150}$] x = actual altitudes of the softstarter in meter, [% of I_e = 100 - $\frac{x-3280}{497}$] x = actual altitude of the softstarter in feet. For derating of voltage, contact your local ABB office.

PSTX – The advanced range

Technical data

Softstarter type	PSTX30...PSTX1250
Protections	Electronic overload protection, EOL Yes (Class 10A, 10, 20, 30)
	Dual overload (separate overload for start and run) Yes
	PTC connection Yes
	PT-100 connection Yes
	Locked rotor protection Yes
	Current underload protection Yes
	Current imbalance protection Yes
	Power factor underload protection Yes
	Under voltage protection Yes
	Over voltage protection Yes
	Voltage imbalance protection Yes
	Earth fault protection / ground fault protection Yes
	Phase reversal protection Yes
	24 V output protection Yes
	Frequency range protection Yes
	Bypass open protection Yes
	User defined protection Yes
	Too long current limit protection Yes
	HMI failure protection Yes
	Fieldbus failure protection Yes
	Extension IO failure protection Yes
	Max number of starts/hour Yes
	Too long start time protection Yes
Warnings	Current underload warning Yes
	Current imbalance warning Yes
	Voltage imbalance warning Yes
	Thyristor overload warning (SCR) Yes
	Electronic overload time-to-trip Yes
	Short circuit warning (for Limp mode) Yes
	Over voltage warning Yes
	Under voltage warning Yes
	Power factor underload warning Yes
	Locked rotor warning Yes
	Faulty fan warning Yes
	THD(U) – Total Harmonic Distortion warning Yes
	Motor runtime limit warning Yes
	Phase loss warning (for stand by) Yes
	EOL warning Yes
External faults detection	Phase loss Yes
	Hight current Yes
	Low control supply voltage Yes
	Faulty usage (e.g. using limp mode inside-delta) Yes
	Faulty connection Yes
	Bad network quality Yes
Internal faults detection	Thyristor overload Yes
	Short circuit Yes
	Open circuit thyristor or gate Yes
	Heat sink over temperature Yes
	Shunt fault Yes
PTC input	Switch off resistance 2825 ohm ± 20%
	Switch on resistance 1200 ohm ± 20%
Other functions	Real time clock Yes
	Event log Yes
	Emergency mode Yes
	Automatic restart Yes
	Secure settings Yes
	Keypad password Yes
	Electronic overload time-to-cool Yes
	Thyristor runtime measurement Yes
	Auto phase sequence detection Yes
	Electricity metering Yes
	Motor heating Yes
	Stand still brake Yes
	Voltage sags detection Yes
	Limp mode with two-phase motor control if one set of thyristors is shorted Yes

For all functions and features see installation and commissioning manual, 1SFC132081M0201 available at new.abb.com/low-voltage/products/softstarters.

¹⁾For the supply circuit 6 A delayed, for MCB use C characteristics.

²⁾For inside delta connection the fuses shall be placed inside the delta. Contact ABB for more information.

³⁾170M6019 with fuse rating 1600 A should be used for 690 V version.

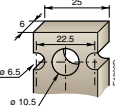

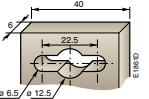

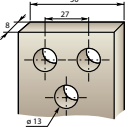

⁴⁾For 690 V version, Bussmann fuses are only available for motors with rated current up to 1150 A.

Fieldbus communication

Introduction

PSR, PSE and PSTX softstarters can be connected to a fieldbus network for monitoring and control. All major industrial fieldbus protocols include different accessories, making the installation very flexible.

5

Protocols with FieldBusPlug

- Modbus-RTU
- Profibus
- DeviceNet
- Modbus TCP (only PSE)

Protocols with Anybus

- Modbus-RTU
- Profibus
- DeviceNet
- EtherNet/IP
- Modbus TCP
- Profinet

Integrated protocol

- Modbus-RTU

- 1** Softstarter PSR
- 2** Softstarter PSE
- 3** Softstarter PSTX
- 4** FieldBusPlug adapter
- 5** FieldBusPlug
- 6** Anybus

Ethernet Modbus TCP interface MTQ22-FBP

- Ethernet connectivity for up to four units
- Modbus TCP protocol
- Supports all network topologies
- No special Ethernet connectors required in MCCs
- Easy to use in withdrawable applications

Designation	Cable length	Catalog number	Global reference code	Pkg qty	Weight (1 pce)	
					kg	(lb)
Ethernet Modbus TCP interface		MTQ22-FBP	1SAJ260000R0100	1	0.20	(0.44)
Cable MTQ to FieldBusPlug adapter	1.5 m	CDP17-FBP.150	1SAJ929170R0015	1	0.01	(0.02)
Passive cable fixing bracket		CDP11-FBP.4	1SAJ929100R0004	4	0.01	(0.02)

To connect the softstarter to a Profibus DP fieldbus system...

you need specific software for PLC setup, (GSD file) which is available at new.abb.com/low-voltage/products/softstarters
If you need help or advice, please contact your local ABB office.

PDQ22-FBP

Profibus DP FieldBusPlug for four devices

- PDQ22 is a member of the ABB FieldBusPlug family of bus connectors. It allows the connection of up to four devices to Profibus DP by just using one Profibus node access. This allows a cost-efficient device integration for devices that are physically located nearby. PDQ22 supports DP-V0 and DP-V1. The degree of protection is IP66. There are separate diagnosis LEDs for bus and device status.

Note that the accessory PDQ22-FBP only works with the PSR and PSE softstarter.

Designation	Catalog number	Global reference code	Pkg qty	Weight (1 pce) kg	(lb)
Quadruple bus connector	PDQ22-FBP	1SAJ240200R0050	1	0.20	(0.44)
DIN rail adapter for PDQ22-FBP	CDA11-FBP.0	1SAJ929300R0001	1	0.11	(0.24)
Fixing bracket for passive plug of connection cable	CDP11-FBP.0	1SAJ929100R0001	1	0.50	(1.10)

Configuration software

- This cable and software can be used for setup and commissioning of the softstarter as well as to keep back-up of the parameter settings.

2CD0C3410150010

Designation	Catalog number	Global reference code	Pkg qty	Weight (1 pce) kg	(lb)
USB to FBP interface cable	UTF21-FBP	1SAJ929400R0002	1	0.01	(0.02)
PDP22/PDQ22 Device Type Manager (DTM) incl. FDT/DTM frame application	PBDTM-FBP	1SAJ924012R0005	1	-	-
